EDUCATION

University of Southern California, Marshall School of Business – Los Angeles, CA
Master of Science in Business Analytics (STEM)

Expected May 2027
GPA: 3.75/4.00

Beijing Jiaotong University – Beijing, China
Bachelor of Economics in Finance

June 2025
GPA: 3.78/4.00

EXPERIENCE

Wishare Media Group – Los Angeles, CA
Data Analyst Intern

Jan 2026 – Aug 2026

- Established a multi-brand Python system integrating Google Ads and GA4 APIs, automating weekly reports and triggering >20% intra-day spend-deviation alerts, cutting reporting time by 50% and keeping all monitored brands within budget.
- Designed a threshold-based SKU decision model using Shopify and cross-channel data to classify 40+ SKUs, diagnose funnels via CTR, CPC, CVR, and ROAS, reallocate ~\$32K in spend, and improve ROAS by 15%.
- Diagnosed landing-page customer behavior with Microsoft Clarity, identifying key engagement and conversion barriers across product pages and presenting optimization suggestions to clients, who implemented 70% of proposed improvements.
- Coordinated creative delivery across Paid Ads, design, and video-editing teams for 8 client brands, prioritizing campaign requirements and streamlining production workflows to reduce creative turnaround time by 40%.

China Securities – Beijing, China
Data Scientist Intern

Jan 2024 – March 2024

- Designed and implemented 2 multi-factor predictive models in Python, applying z-score standardization and correlation-based evaluation (IC) to assess signal strength, increasing factor stability by 12% and improving predictive accuracy.
- Built a scalable data pipeline using Python (Tushare API) and MySQL to ingest, clean, and transform 500K+ structured equity records, reducing manual processing time by 20% and enabling efficient downstream analysis and modeling.
- Performed time-series analysis and factor validation through 3-year rolling-window portfolio backtests, measuring alpha, beta, Sharpe ratio, volatility, and signal consistency to reduce signal variability by 15% across changing market conditions.
- Developed interactive dashboards in Tableau to visualize model outputs and key performance metrics, uncovering non-obvious stock patterns and boosting interpretability of investment strategy for cross-functional stakeholders.

China International Capital Corporation – Beijing, China
Equity Research Intern

Jan 2023 – March 2023

- Aggregated and analyzed macro policy data and firm-level financials across 20+ companies, transforming unstructured information into structured datasets to support trend analysis, feature extraction, and data-driven screening frameworks.
- Built structured analytical models in Excel to standardize key variables (capacity, cost structure, capital allocation) and enable scenario-based analysis across 15+ wind energy projects.
- Performed cross-sectional benchmarking and exploratory data analysis on leading firms, identifying drivers (margins, revenue mix, geographic exposure) and translating findings into KPIs for comparative analysis.

PROJECTS

Apple SEC Financial Analytics & GenAI Assistant (GitHub | Demo)

July 2026 – Aug 2026

- Built an automated Python and SQL ETL pipeline that transformed official SEC XBRL data and Apple's 10-K filing into validated Parquet and DuckDB datasets covering 7 financial metrics for FY2021–FY2025.
- Engineered a hybrid financial assistant combining DuckDB queries with RAG, calculating exact values and multi-year comparisons while using the OpenAI API and cited MD&A evidence to explain performance drivers.
- Visualized 5-year financial performance, trends and 6 risk themes from Item 1A using TF-IDF retrieval and NMF topic modeling in a self-service Streamlit dashboard, with 21 tests validating data and citations.

USC Marshall Global AI Case Competition – Los Angeles, CA

Sep 2025 - Oct 2025

- Collaborated in a 4-member team to analyze MSBA scheduling workflows through user interviews and time-allocation data, defining coordination pain points and authoring a PRD with success metrics for an AI-powered scheduling assistant.
- Prototyped an AI-powered scheduling assistant integrating NLP-based summarization and Calendar API, consolidating multi-source data through a unified interface to identify shared availability and automate ~80% of manual coordination tasks.
- Defined an A/B testing framework to evaluate feature impact on scheduling efficiency and user engagement, analyzed usability and model accuracy, and presented the MVP, earning top-decile feedback for UX and technical robustness.
